

2D Symmetry

Symmetry is when one shape becomes exactly like another if you flip, slide or turn it. A mirror image or reflection is an example of symmetry.

Reflection Symmetry

When one half is the exact reflection of the other half. The line that separates the sections that are the same is called the Line of Symmetry.

Rotational Symmetry

When the image is rotated around a central point so that it appears 2 or more times. The number of times the Rotational Symmetry occurs is called the Order.
